

DNA Security Starter Package Asset Marking and Recovery

Recognizing that DNA-based evidence is the cornerstone of modern-era law enforcement, Applied DNA Sciences has developed the ultimate asset and valuable marking tool.

DNAnet[®] helps to expand and strengthen any community security effort by providing a means of directly linking valuables and criminals to crimes. Valuables and assets are tagged with an indelible, fluorescing DNA-marked liquid. For businesses, DNAnet offers protection for tools, equipment, inventory and vehicles.

The DNAnet mark facilitates the rapid return of lost or stolen goods to their owner. As a crime is investigated, detection of a fluorescing DNAnet mark indicates that an item is registered. This assists police in linking offenders and stolen items to a specific crime scene, creating a greater ability to identify and convict.

DNA-based solutions represent the next evolution in security technology. Applied DNA Sciences has assembled specially-priced DNA Security Starter Packages to help security firms expand and complement current product offerings with exciting, effective products.
